#### 問題&辦法

#### async throws

```
func SignIn(email: String, password: String) async throws {
//
         Way 2.
        do {
            let authResult = try await Auth.auth().signIn(withEmail: email, password: password)
            print("OK: \(authResult.user.uid)")
            self.Login()
       } catch {
            print("ERROR: \(error.localizedDescription)")
            throw error
//
          Way 1.
//
          Auth.auth().signIn(withEmail: email, password: password) { result, error in
//
             if let error = error {
                  print("ERROR: \(error)")
                  return
             if let result = result {
                  print("OK, and UID: \(result.user.uid)")
                  self.Login()
//
```

## 問題&辦法

#### async throws

```
func SignUp(email: String, password: String) async throws {
//
         Way 2.
        do {
            let authResult = try await Auth.auth().createUser(withEmail: email, password: password)
            print("OK: \(authResult.user.uid)")
        } catch {
            print("ERROR: \(error.localizedDescription)")
            throw error
//
         Way 1.
//
         Auth.auth().createUser(withEmail: email, password: password) { result, error in
//
             if let error = error {
                  print("ERROR: \(error)")
//
                  return
//
//
             if let result = result {
                  print("OK, and UID: \(result.user.uid)")
//
//
```

# 問題&辦法

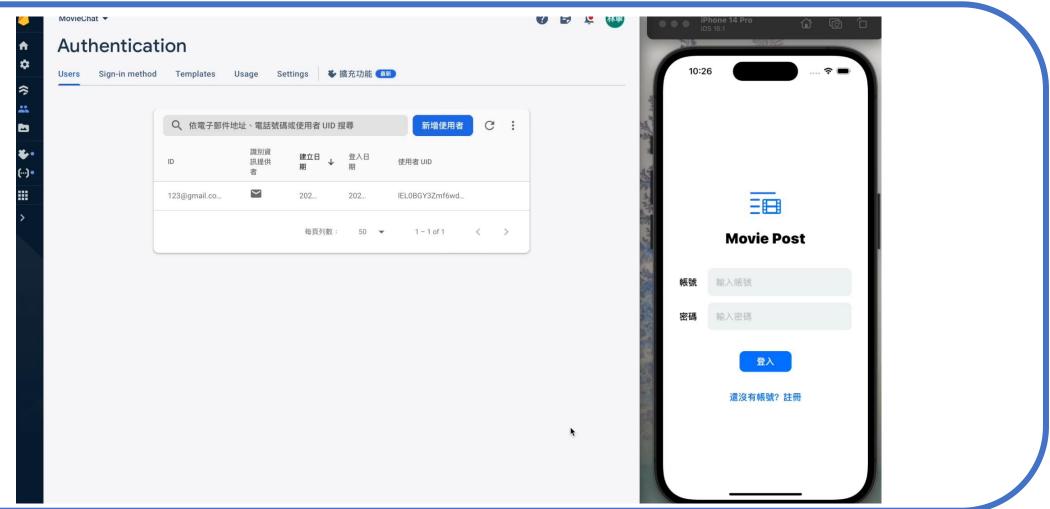

#### **import** PhotosUI

```
struct ImagePicker: View {
    @Binding var selectedImageData: Data?
    @State private var selectedImage: PhotosPickerItem?
    var body: some View {
        VStack(alignment: .leading) {
            Text("圖片:")
                .font(.headline)
           PhotosPicker(selection: $selectedImage, matching: .images) {
                if let selectedImageData,
                   let image = UIImage(data: selectedImageData) {
                    Image(uiImage: image)
                        .resizable()
                        .scaledToFit()
               } else {
                   Label("選擇圖片", systemImage: "photo")
            .onChange(of: selectedImage) { newImage in
                   if let data = try? await newImage?.loadTransferable(type: Data.self) {
                        selectedImageData = data
            .padding(.vertical, 2)
        .padding(.horizontal, 15)
```
